

DOJSID Exchange

Wednesday, September 10, 2014
10:42 AM

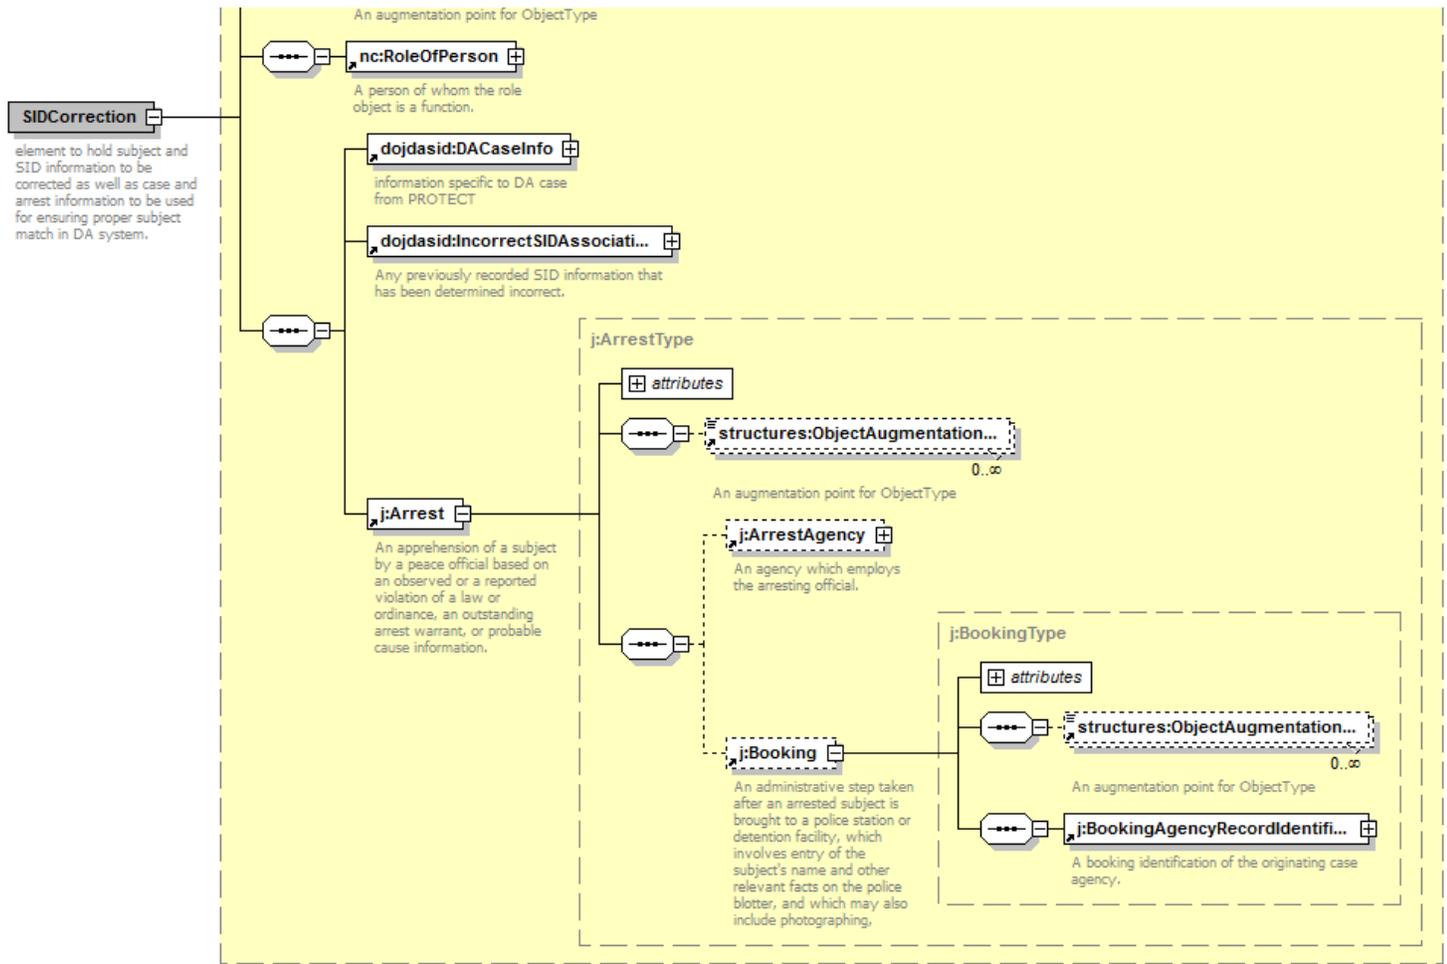

SIDExchangeDocument may contain 1-many DACountySIDUpdates. Specifically, one DACountySIDUpdates element will be present for any county from which the target subject information originated in the PROTECT system.

Each SIDUpdate element will contain a single subject for whom update information pertains. The biometrically verified and DOJ-assigned SID will be represented within the j:Subject/nc:RoleOfPerson/nc:PersonStateIdentification element along with any other identifying subject information. The j:Subject element ID value should consist of the subject_id value that was provided for this record from the PROTECT system. If there is any ATN correction information for a subject, that can be provided in this SIDUpdate element as well, contained within the dojdasid:ATNCorrection element where both the incorrect ATN and new, corrected value should be provided.

SIDCorrection elements will be used in instances where a previously DOJ-assigned SID was determined to be incorrect and a new value must be assigned. Any and all subject, case, and arrest information associated to the correct subject as well as the previous, incorrectly assigned subject info (including previously incorrect SID) should be provided here.
